Mulawin, Tanza, Cavite 4108

PROFESSIONAL SUMMARY

Entry-level web developer with hands-on experience building full-stack applications through academic projects, working across React, Laravel, PHP, JavaScript, and related front-end and back-end tools. Comfortable with core web development fundamentals, troubleshooting, and deployment workflows. Brings a solid technical foundation, genuine willingness to learn, and consistent follow-through on tasks from start to finish.

EDUCATION

Bachelor of Science in Computer Science

Emilio Aguinaldo College, *Dasmarinas, Cavite*

August 2022 - July 2026

- Cum Laude (Batch 2026)

WORK EXPERIENCE

Junior Web Developer

June 2025 - January 2026

Philippines Central Engagement Services Inc., *Rosario, Cavite*

- Contributed to full-stack development of the PWD-E platform serving 5,000+ users, building modular front-end components with AngularJS and Bootstrap, designing UI/UX workflows in Figma, and applying secure coding practices to deliver responsive, cross-browser compatible features.
- Performed QA testing (functional, regression, user acceptance) and debugged front-end and back-end issues using developer tools, while collaborating through structured Git workflows to improve application performance and stability for a production system partnered with IKEA, Tahanang Walang Hagdan, and Mr. Quickie.

SKILLS

Web Development | Front-End Development | Back-End Development | Full-Stack Development | ReactJS | Laravel | JavaScript | HTML | CSS | Tailwind | Bootstrap | PHP | MySQL | SQL | VS Code | GitHub | Git | XAMPP | Figma | Angular | Wordpress

PROJECT EXPERIENCE

SECT: Web-Based Examination System with Cheating Probability Index

- Developed a full-stack web-based examination system using ReactJS, Laravel, and a Python/Flask ML service, integrating real-time behavioral monitoring (tab switches, keystroke dynamics, response timing) with Isolation Forest, One-Class SVM, and Hidden Markov Model algorithms to compute a Cheating Probability Index for academic integrity enforcement.
- Built role-separated portals for admin, instructor, and student users with features including live anomaly alerts, detailed CPI reporting dashboards, essay grading, and a typing-baseline system for keystroke-based behavioral drift detection, streamlining exam monitoring and reducing manual proctoring effort.

PWD-E

- Built full-stack features using AngularJS (front-end and back-end logic) and Bootstrap, including form handling and data validation, for a production platform serving 5,000+ users with responsive layouts across devices and browsers.

- Designed Figma prototypes, developed and maintained WordPress pages, performed QA testing across multiple web applications, and used Git branching/PR workflows, contributing to bug fixes and performance improvements post-launch.

Restaurant Landing Page

- Created a fully responsive, modern landing page for a restaurant using Bootstrap and Tailwind CSS, incorporating key sections like featured dishes and customer reviews to enhance online engagement.
- Optimized cross-device and browser compatibility with visually appealing layouts and clear calls-to-action, helping the restaurant stand out and drive reservations effectively.

Order Kiosk – Burger Shot

- Developed an interactive, self-service ordering kiosk front-end for a fictional burger restaurant using HTML, Tailwind CSS, and jQuery to simulate a touchscreen ordering experience.
- Implemented dynamic menu interaction, real-time order summaries, and intuitive quantity/price management, creating a user-friendly interface optimized for both desktop and kiosk environments.
