PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience developing full-stack web applications through academic and personal projects. Experienced working with React, Laravel, PHP, JavaScript, Bootstrap, HTML, CSS, SQL, Python, WordPress, and Figma, with a solid understanding of web development fundamentals and software development concepts. Demonstrates strong problem-solving skills, attention to detail, and the ability to learn new technologies quickly. Eager to apply technical knowledge in a professional environment, contribute to meaningful projects, and continuously develop technical and professional skills in a collaborative environment.

TECHNICAL SKILLS

Front-End Development: ReactJS, Angular, JavaScript, HTML, CSS, Bootstrap, Tailwind

Back-End Development: Laravel, PHP, Python, MySQL, SQL

Programming Languages: JavaScript, PHP, Python, SQL, C++, HTML, CSS

Tools and Platforms: VS Code, GitHub, Git, XAMPP, Figma, WordPress, PowerBI, Tableau, Looker Studio, DigitalOcean, Claude, Copilot

WORK EXPERIENCE

Junior Web Developer

June 2025 - January 2026

Philippines Central Engagement Services Inc., Rosario, Cavite

- Contributed to the development of the PWD-E job hiring platform supporting 5,000+ users, implementing front-end components using AngularJS and Bootstrap, backend functionality with PHP, form handling, data validation, and responsive features across browsers and devices.
- Designed UI/UX workflows and high-fidelity prototypes in Figma, maintained WordPress websites and plugins, and gained hands-on experience with basic database management, hosting configurations, and website deployment processes while collaborating through structured Git workflows.
- Performed QA testing (functional, regression, and user acceptance), debugged front-end and back-end issues using developer tools, and applied secure coding practices including input validation and sanitization to improve application stability and reliability.

PROJECT EXPERIENCE

SECT: Web-Based Examination System with Cheating Probability Index

- Developed a full-stack web-based examination system using ReactJS, Laravel, MySQL, and Python/Flask, deployed on DigitalOcean with REST API integration between the application backend and machine learning service for academic integrity analysis.
- Implemented a behavioral anomaly detection pipeline by collecting tab switches, keyboard events, response timing, and keystroke dynamics, then processing extracted features using Isolation Forest, One-Class SVM, and Hidden Markov Model algorithms to calculate the Cheating Probability Index.
- Built role-based dashboards for administrators, instructors, and students with exam management, anomaly reports, CPI analytics, and behavioral monitoring features while integrating database models, backend services, and cloud deployment workflows.

PWD-E

- Implemented core platform features and accessibility enhancements using AngularJS (front-end components and application logic) and Bootstrap, including dynamic interfaces, form handling, data validation, and responsive layouts for a production platform serving 5,000+ users across devices and browsers.
- Designed Figma prototypes, maintained WordPress pages, performed QA testing, and utilized Git branching workflows to manage updates, resolve issues, and support feature improvements during post-launch development.
- Developed accessibility improvements aligned with WCAG guidelines, enhancing screen reader compatibility, keyboard navigation, color contrast, and interface readability to provide a more inclusive experience for users with dyslexia and visual impairments.

Burger Snipe: Restaurant Landing Page

- Developed a responsive four-page restaurant landing site using HTML5, CSS3, vanilla JavaScript, Bootstrap 5, and Tailwind CSS, featuring a shared responsive navigation system and mobile-friendly layouts across Home, Menu, About, and Order pages.
- Implemented interactive JavaScript functionality including category-based menu filtering using data attributes, live search, client-side cart quantity tracking, and dynamic running total calculations for the ordering interface.
- Built a client-side checkout simulation that validates payment input and calculates change, while organizing menu items in a JavaScript array for easier updates and maintenance.

EDUCATION

Bachelor of Science in Computer Science

August 2022 - July 2026

Emilio Aguinaldo College, Dasmarinas, Cavite

- Cum Laude, Batch 2026
